**Innovation Strategies for a Global Economy: Development, Implementation and Management**

Innovation provides a path to sustainable growth but a strategy for innovation in a global economy is no longer national. Countries must attract people and investment from abroad and participate in world markets and institutions. This book starts with the language and system framework used to discuss innovation, and the statistical indicators needed to describe the activity. It then looks at innovation strategies, their components and their management before proposing directions for new work in developed and in developing countries.

## **Contents**

---

*List of figures*

*List of tables*

*List of Abbreviations*

*Acknowledgements*

*Preface*

### **PART I: THE ISSUES AND DESCRIPTION**

1. A challenging world
2. A systems approach

### **PART II: DEFINITIONS AND MEASUREMENT**

3. Talking about innovation
4. What can be measured?
5. Using the indicators

### **PART III: INNOVATION STRATEGIES**

6. Innovation strategies, advice and direction
7. Innovation strategy components
8. Innovation strategy co-ordination

### **Part IV: ADVANCING INNOVATION**

9. Innovation and development
10. New directions
11. Challenges for innovation
